

ALPHONCE ODUOR OYUNGA

Fullstack Software Developer & Product manager

[Email](#) | +254792139369 | Kisumu, Kenya | [Github](#) | [Linkedin](#) |

PROFESSIONAL SUMMARY

Fullstack software developer with hands-on experience building services and CLI tools in Golang, JavaScript and Python. Strong foundations in Linux, version control, relational and non-relational databases, and API development. Trained through Zone01 Kisumu's project-based apprenticeship, working in Agile/Scrum teams on real codebases. Fast learner who ships working software.

TECHNICAL SKILLS

Languages: Go (Golang), Bash / Shell scripting, Javascript, Python

Frameworks: React(frontend), Gin(backend)

Databases: PostgreSQL, SQLite (relational)

Tools: Git, GitHub, Linux (Ubuntu), vscode, vite, Postman, Docker, Claude, Gemini cli

Practices: Agile / Scrum, code review, debugging, data modelling, version control

PROJECTS

Chama — Merry-go-round table banking | [chama-application](#)

Product manager | Go + Gin, PostgreSQL + GORM, React + Vite + Tailwind CSS

- Leading a 8-person team building a digitised table banking group platform for Kenyan chama groups.
- Delivered full technical documentation — requirements doc, competitive research, tech stack ADRs, and project glossary.

SatGate — an EAC form protector | [SatGate](#)

Backend Developer | Rust

- Improved data entry by linking payment hash directly to messages.

Guidely — a citing AI archivist | [guidely](#)

Fullstack | Python, React+Vite + Tailwind CSS, OpenAI API

- Built a full stack RAG assistant that processes unstructured corporate documents into vector embeddings for accurate plain language QA

EXPERIENCE

Software Development Apprentice

Zone01 Kisumu | January 2026 – Present | Kisumu, Kenya

- Built backend services and CLI tools in Go using goroutines, channels, error handling, and structured project layout.
- Developed and consumed RESTful APIs; managed PostgreSQL schemas and queries using GORM.
- Operated daily in Linux (Ubuntu) for development, scripting, and server-side tooling.
- Collaborated via Git and GitHub — branching, pull requests, and code reviews in Agile team workflows.

CORE STRENGTHS

- Fast self-learner — moved from no formal CS background to building backend systems in Go within months of starting.
- Attention to detail in code quality, debugging, and system design.
- Collaborative team player, comfortable in Agile/Scrum environments with real delivery expectations.
- Interested in locally relevant software — particularly tools serving East African users and financial contexts.
